Not-for-Profit (Animal Welfare)

Solution:

DBGallery Enterprise Cloud

Client Since

July, 2021

About Network for Animals

With operations in 34 countries, Network for Animals (NFA) is a non-governmental, international animal welfare organisation crusading for animals around the world. They often work in difficult situations where animals need most help.

Their mission: Make the world a better place for animals.

How DBGallery Helps

With tens of thousands images in over 250GB of storage, and nearly impossible to find anything, an effective archive and tagging systems was badly needed. DBGallery's cloud solution provided the tools to effectively tag and organize their large image collection. Images are now at everyone's fingertips, from anywhere...and everyone breaths easier knowing they can find the right images for their various campaigns.

Fact: Expanded DBGallery to a sister company, Animal Survival International, after a few months of use at Network for Animals.

"We now have an archive that is more organized and easy to access remotely. We also have a backup in case our hard drives crash." - Nicolette Peters, Network for Animals

>30,000 images

260,000 GB of storage

100% increase in ability to find images
